WHAT ARE TICKS?

Tick bites are dangerous because they can give you diseases like Lyme disease.

Ticks do not fly. They wait in tall grass or low bushes until someone comes along. Then the tick grabs on and wanders around until it finds a place to bite.

PROTECT YOURSELF!

DEET repels ticks.
Ask an adult to help you apply a repellent containing DEET on your arms and legs. Always follow label instructions.

Ticks like to sit in the grass and in bushes.
Stay in the center of paths when you are out walking.
Also, don't sit or lie directly on the ground.

CHECK YOURSELF!

Use a mirror and

your fingers to check

for ticks. If you feel a

bump or see a new

freckle or a freckle

with legs, ask an adult

freckle, a moving

to check it.

Ticks crawl ALL OVER a person until they find a good place to hide. ALWAYS check yourself for ticks after being outside, especially in areas where ticks hang around.
A tick may feel like a small bump. Some ticks

look like freckles.

Remember, ticks can be anywhere, so check EVERYWHERE when you bathe!

IF YOU GET A TICK...

Grab the tick as close to the head as you can. Pull gently until the tick lets go. Wrap the tick in tissue and seal it in a plastic bag with name, date and contact information. Bring it to your local Health Department or nearest lab to have it identified and tested for Lyme and other tick-borne diseases.

Clean the bite area after the tick is removed.
