#### INTRODUCTION

The Virginia Department of Conservation and Recreation's Division of Natural Heritage (DCR-DNH) was established in 1986 to protect Virginia's biological diversity. DCR-DNH's work focuses on science-based conservation to protect Virginia's native plant and animal life and the ecosystems upon which it depends. Scientists collect data on natural communities and rare plants and animals, develop land conservation data and online mapping tools, and provide upto-date information to enable timely conservation decisions. Virginia's Natural Area Preserve System provides long-term protection and outdoor recreation access to some of the state and the planet's most ecologically important lands. In collaboration with our partners, DCR-DNH's work focuses on ensuring the conservation of Virginia's common, rare and endangered species and ecosystems. As a member of NatureServe, DCR's Natural Heritage Program also contributes to an understanding and conservation of our global biodiversity.

The first step in conservation is identifying and prioritizing what needs protecting. DCR-DNH identifies Natural Heritage Resources (NHR) which are in need of conservation attention. NHR are defined in the Virginia Natural Area Preserves Act of 1989 (Section 10.1-209 through 217, Code of Virginia), as the habitat of rare, threatened, and endangered plant and animal species; exemplary natural communities, habitats, and ecosystems; and other natural features of the Commonwealth.

To prioritize this protection, DCR-DNH maintains lists of the most significant elements of our natural diversity. These lists and reports, developed for plants and lichens, animals, and natural communities, focus the Division's inventory on the elements of biodiversity most likely to be lost without conservation action in the near future. Most importantly, these lists are not only useful for DCR-DNH, but can be used by other agencies, organizations, and individuals to guide protection and inform land-use decisions. In formulating this list of rare animals, the Division uses information from previous studies, museum records, the observations and opinions of experts, DCR-DNH staff scientists, and field inventories.

The first section included in this report is the Rare Animal List. This list contains information on the legal and biological status of Virginia's rarest known native animals, including vertebrates (n = 192), and insects and selected other invertebrate groups (n = 659). Certain marine species that are listed as federally endangered or threatened are only included in the appendices. Only those species that use discrete habitat patches or can directly benefit from habitat protection are included in the main taxonomic lists.

Taxa placed on the rare lists are considered to be sufficiently rare or threatened in Virginia to merit tracking their status and population trends and conducting field inventory to locate new occurrences or update known occurrences. 'Sufficiently rare' includes species with

conservation status ranks of G1 through G3 and/or S1 through S2 (See <u>NatureServe Explorer</u> for detailed definitions), and/or are listed as threatened or endangered by the Commonwealth of Virginia (see <u>Virginia Department of Agriculture and Consumer Services</u> and <u>Virginia Department of Wildlife Resources</u>) or under the U.S. Endangered Species Act (see <u>U.S. Fish and Wildlife Service</u>). Each species is presented with information on its conservation and legal status.

Included on the Rare Animal List are 'animal assemblages'. An animal assemblage is a group of animals, often multiple species, found in a high concentration due to either a life stage (i.e. breeding or migrating) or indicative of habitat quality. Examples of an animal assemblage include mussel concentration site, migratory bird migration corridor, or a heron rookery. The assemblage is the element, with global and state (i.e. subnational) ranks accorded to them. Note, the actual species within an assemblage may or may not be tracked.

The second section is the Animal Watchlist. This list contains information on the conservation and legal status of 374 additional taxa (72 vertebrates, 314 invertebrates) that are decidedly uncommon in Virginia but not scarce enough to merit inclusion on the Rare Animal List. Species on this list are monitored to determine general population trends. Some species included on the Animal Watchlist were formerly on the Rare Animal List but have been determined to be more common than previously believed. Other species on the Watchlist are declining and may warrant placement on the Rare Animal List in the future if their populations continue to decline.

The third section included in this report is the Animal Review List (Taxa of Uncertain Status). Many of these species lack numerical ranks, indicating that they are poorly known from a distributional and/or taxonomic standpoint. Although some of these species may prove to be conservation targets, more field and museum data are needed to assess their degree of rarity in Virginia and/or taxonomic status. There are 194 species (3 vertebrates, 207 invertebrates) in this category.

Two appendices are provided to aid in summarizing or highlighting the status of certain species. Appendix 1 summarizes all animals that are protected by federal or state endangered species acts are included in this list (except as noted above). Federally listed species are protected by the Endangered Species Act of 1973, as amended. The U.S. Department of the Interior's Fish and Wildlife Service administers the Act, listing and protecting federally endangered and threatened species. The Virginia Department of Wildlife Resources has the regulatory responsibility for the listing and protection of the state's endangered and threatened animals (excluding the Class Insecta) under the Virginia Endangered Species Act (Section 29.1-564 through 570, Code of Virginia). The Virginia Plant and Insect Species Program within the Virginia Department of Agriculture and Consumer Services has regulatory 2 responsibility for the listing and protection of the state's insects (and plants) under the Virginia Endangered Plant and Insect Act (Section 3.1-1020 through 1030, Code of Virginia). DCR-DNH is a primary source of recommendations to each of the regulatory agencies for species that are in need of listing as endangered or threatened. As of this publication, there are 75 federal and 136 state listed

animal species in Virginia. Note, not all listed animal species are tracked by DCR-DNH, such as marine mammals and others.

Appendix 2 lists species once native to Virginia, that are now considered either extinct (the species does not exist anywhere) or extirpated (the species does not exist in a defined area) from Virginia.

Natural Heritage Resource lists are necessarily dynamic, and are revised frequently, with updates occurring as data become available. Such revisions assure the most current knowledge of the status of Virginia's animals. Animals are added to the list when it is determined that they have become rare or threatened to such an extent that their continued existence in Virginia is in jeopardy. Animals are removed from the list when additional field surveys or other new data indicate they are more common than previously believed and do not warrant priority conservation efforts.

If you have information which could refine this list, please contact DCR-DNH staff zoologist Steve Roble at (804) 726-7951 (email: steve.roble@dcr.virginia.gov) or fill out the <u>Rare Species Sighting Form</u> (see also Appendix 3).

#### LIST FORMAT

The lists are sorted by broad taxonomic groups and then ordered alphabetically by scientific name within each group. The format of each list consists of six fields: scientific name, common name, global rank, state rank, federal status, and state status. These fields are also used in the lists appearing in Appendix 1. To aid in the interpretation of the lists, a brief explanation of each field and a summary of abbreviations follow.

#### Column 1. Scientific name:

Nomenclature of animals is not contained in any single source. The most recent taxonomic sources are examined by the staff zoologist and, when necessary, direct consultations with experts are used to maintain the most scientifically accepted names for all animal groups. Divergences from these opinions are rare and generally occur only while an ongoing taxonomic study is being conducted. Contact the staff zoologist if you have questions or comments regarding the scientific names used herein.

#### Column 2. Common name:

A common name is provided for the convenience of the user. Standard common names have been developed and universally adopted for only a few animal groups; therefore, the user is cautioned to use scientific names whenever possible. The common names for most vertebrates and a few selected aquatic invertebrate groups (e.g., mussels) are recognized as stable. Most invertebrate species lack common names and it may not be practical to provide such names.

They are usually indicated in the list as "a caddisfly", "a millipede", etc. While many common names that appear in the list, especially those of invertebrates, are not widely used or universally accepted, the primary sources applied to species in selected groups included in this list were based on the following resources.

#### Fish

Nelson, J.S., E.J. Crossman, H. Espinosa-Pérez, L.T. Findley, C.R. Gilbert, R.N. Lea, and J.D. Williams. 2004. Common and Scientific Names of Fishes from the United States, Canada, and Mexico. Sixth Edition. American Fisheries Society, Special Publication 29, Bethesda, Maryland. 386 pp.

# **Amphibians and Reptiles**

Crother, B.I. (editor). 2012. Scientific and Standard English Names of Amphibians and Reptiles of North America North of Mexico, with Comments Regarding Confidence in our Understanding. 7<sup>th</sup> Edition. Society for the Study of Amphibians and Reptiles, Herpetological Circular Number 39. 92 pp.

# <u>Birds</u>

American Ornithologists' Union. 1998. Check-list of North American Birds. Seventh Edition.

American Ornithologists' Union, Washington, D.C. 829 pp. [as modified by subsequent supplements and corrections published in The Auk].

- Glassberg, J. 1999. Butterflies Through Binoculars The East: A Field Guide to the Butterflies of Eastern North America. Oxford University Press, New York, NY. 242 pp.

#### Column 3. Global rank:

Global ranks are assigned by NatureServe and its member programs (including DCR-DNH) and collaborators. They use a rigorous, consistent, and transparent methodology to assess the conservation status (extinction or extirpation risk) of species of plants, animals, and fungi, as well as the conservation status (elimination or extirpation risk) of ecosystems (ecological communities and systems). For animals, global ranks (a.k.a., 'G-rank') designate a rarity rank based on the range-wide status of a species or subspecies. The ranks are assigned after considering a suite of factors, including number of occurrences (i.e. populations), number of individuals, and severity of threats. Visit <a href="NatureServe's website">NatureServe's website</a> to learn more about the methodology. Each rank is defined below (Source: NatureServe Explorer, 2020. Statuses. Accessed at <a href="https://explorer.natureserve.org/AboutTheData/Statuses">https://explorer.natureserve.org/AboutTheData/Statuses</a>)

- G1 = Critically Imperiled At very high risk of extinction or elimination due to very restricted range, very few populations or occurrences, very steep declines, very severe threats, or other factors.
- G2 = Imperiled At high risk of extinction or elimination due to restricted range, few populations or occurrences, steep declines, severe threats, or other factors.
- G3 = Vulnerable At moderate risk of extinction or elimination due to a fairly restricted range, relatively few populations or occurrences, recent and widespread declines, threats, or other factors.
- G4 = Apparently Secure At fairly low risk of extinction or elimination due to an extensive range and/or many populations or occurrences, but with possible cause for some concern as a result of local recent declines, threats, or other factors.
- G5 = Secure At very low risk or extinction or elimination due to a very extensive range, abundant populations or occurrences, and little to no concern from declines or threats.
- GH = Possibly Extinct Known from only historical occurrences but still some hope of rediscovery. Examples of evidence include (1) that a species has not been documented in approximately 20-40 years despite some searching and/or some evidence of significant habitat loss or degradation; (2) that a species has been searched for unsuccessfully, but not thoroughly enough to presume that it is extinct or eliminated throughout its range.
- GX = Presumed Extinct Not located despite intensive searches and virtually no likelihood of rediscovery
- GU = Unrankable Currently unrankable due to lack of information or due to substantially conflicting information about status or trends. NOTE: Whenever possible (when the range of uncertainty is three consecutive ranks or less), a range rank (e.g., G2G3) should be used to delineate the limits (range) of uncertainty.
- G\_? = Inexact Numeric Rank—Denotes inexact numeric rank (e.g. G3?)
- G\_Q = Questionable taxonomy Taxonomic distinctiveness of this entity at the current level is questionable; resolution of this uncertainty may result in change from a species to a subspecies or hybrid, or the inclusion of this taxon in another taxon, with the resulting taxon having a lower conservation priority (e.g., G3Q).
- G\_T\_ = Infraspecific Taxon The status of infraspecific taxa (subspecies or varieties) are indicated by a "T-rank" following the species' global rank. Rules for assigning T-ranks follow the same principles outlined above. For example, the global rank of a critically imperiled subspecies of an otherwise widespread and common species would be G5T1.
- GNR = Unranked Global rank not yet assessed.

GNA = Not Applicable — A conservation status rank is not applicable because the species or ecosystem is not a suitable target for conservation activities. A global conservation status rank may be not applicable for several reasons, related to its relevance as a conservation target. For species, typically the species is a hybrid without conservation value, or of domestic origin.

#### Column 4. State rank

State ranks (a.k.a, S - rank) are assigned by the DCR-DNH Staff Zoologist in a manner similar to that described for global ranks, but consider only factors within the political boundaries of Virginia. For example, an animal that is endemic to Virginia (found nowhere else in the world) will have the same global and state ranks, whereas a species that may be common in the northeastern United States but only known from a few occurrences in Virginia will have global and state ranks that differ. State ranks found in the Rare Animal List are explained below:

- S1 = Critically Imperiled— At very high risk of extirpation in the jurisdiction due to very restricted range, very few populations or occurrences, very steep declines, severe threats, or other factors.
- S2 = Imperiled At high risk of extirpation in the jurisdiction due to restricted range, few populations or occurrences, steep declines, severe threats, or other factors.
- S3 = Vulnerable— At moderate risk of extirpation in the jurisdiction due to a fairly restricted range, relatively few populations or occurrences, recent and widespread declines, threats, or other factors.
- S4 = Apparently Secure— At a fairly low risk of extirpation in the jurisdiction due to an extensive range and/or many populations or occurrences, but with possible cause for some concern as a result of local recent declines, threats, or other factors.
- S5 = Secure— At very low or no risk of extirpation in the jurisdiction due to a very extensive range, abundant populations or occurrences, with little to no concern from declines or threats.
- SH = Possibly Extirpated Known from only historical records but still some hope of rediscovery. There is evidence that the species or ecosystem may no longer be present in the jurisdiction, but not enough to state this with certainty. Examples of such evidence include (1) that a species has not been documented in approximately 20-40 years despite some searching and/or some evidence of significant habitat loss or degradation; (2) that a species or ecosystem has been searched for unsuccessfully, but not thoroughly enough to presume that it is no longer present in the jurisdiction.
- SX = Presumed Extirpated—Species is believed to be extirpated from the state. Not located despite intensive searches of historical sites and other appropriate habitat, and virtually no likelihood that it will be rediscovered.

- SU = Unrankable—Currently unrankable due to lack of information or due to substantially conflicting information about status or trends.
- S\_? = Inexact Numeric Rank Denotes inexact numeric rank (e.g., S3?).
- S\_S\_ = Rank is uncertain, but considered to be within the indicated range of ranks (e.g., S2S4).
- SNR = Unranked—State conservation status not yet assessed.
- SNA = Not Applicable —A conservation status rank is not applicable because the species is not a suitable target for conservation activities (e.g., hybrids without conservation value and non-native species).

# Breeding Status Qualifiers (mainly applied to birds in Virginia):

- B = Breeding—Conservation status refers to the breeding population of the species in the state.
- N = Non-breeding—Conservation status refers to the non-breeding population of the species in the state.
- M = Migrant—Migrant species occurring regularly on migration at particular staging areas or concentration spots where the species might warrant conservation attention.
   Conservation status refers to the aggregating transient population of the species in the state.

#### Column 5. Federal status:

Federal status is determined by the U.S. Fish and Wildlife Service and the National Marine Fisheries Service. This status is used for all animals listed as endangered or threatened by the U.S. government and receiving protection under the federal Endangered Species Act. The list also notes those species that have been formally proposed for listing or are currently candidates under consideration for listing. The federal status formerly known as "Category 2, candidate species" was abolished on February 28, 1996; species formerly designated as "Category 1, candidate species" are now referred to simply as "candidate species."

- LE = Listed Endangered. A species threatened with extinction throughout all or a significant portion of its range.
- LT = Listed Threatened. A species likely to become endangered in the foreseeable future.
- LE/PT = Currently listed as endangered but proposed for downlisting to threatened.
- LT/SA = Listed as Threatened due to Similarity of Appearance. The species so closely resembles an endangered or threatened species or population that enforcement personnel of the U.S. Fish and Wildlife Service cannot readily distinguish between the taxa (e.g., the northern population of the bog turtle is federally listed as endangered, but turtles from

the southern population, which includes Virginia, are not readily distinguishable from them).

PE = Proposed Endangered. A species proposed for listing as endangered.

PT = Proposed Threatened. A species proposed for listing as threatened.

C = Candidate. There is enough available information to propose the taxon for listing, but listing is "precluded by other pending proposals of higher priority". The U.S. Fish and Wildlife Service is "directed to make prompt use of the emergency listing if the well-being of any such species is at significant risk." (Formerly Candidate, Category 1)

## Column 6. State status:

State status is determined by the Virginia Department of Wildlife Resources (all animals except insects) and the Virginia Department of Agriculture and Consumer Services (insects only). The informal category of "Special Concern" species that was previously maintained by the Virginia Department of Wildlife Resources was abolished by that agency on January 1, 2011.

- LE = Listed Endangered; defined as a species that is in danger of extinction throughout all or a significant portion of its range.
- LT = Listed Threatened; defined as a species that is likely to become endangered within the foreseeable future.
- LT/PDL Listed as Threatened but proposed for delisting (removal from the state list of Endangered and Threatened wildlife). However, at the present time, the species is still listed as Threatened pending further action and is thus protected under Virginia's Endangered Species Act.

PE = Proposed Endangered. A species proposed for listing as endangered.

PT = Proposed Threatened. A species proposed for listing as threatened.

The following two tables summarize the ranks and legal status of the rarest animals tracked by the DCR-DNH.

Summary of the rarest animals by Global and State Ranks

Rank <sup>a</sup>	Fish	Amphibians	Reptiles	Birds <sup>b</sup>	Mammals	Invertebrates
GH	0	0	0	0	0	4
G1	6	2	1	1	0	177

G2	11	3	2	3	4	107
G3	15	6	3	5	8	138
SX	2	0	0	3	6	12
SH	2	0	1	8	0	59
S1	32	8	9	39	10	368
S2	36	14	5	20	6	224

a: Rounded ranks (e.g., G1G2 is combined with G1, S2S3 with S2, G2G4 is treated as G3, S1S3 is treated as S2, etc.); also T ranks are treated as equivalent to G ranks for the purposes of this table.

b: Breeding ranks of birds were used as the S ranks for the purposes of this table (except for Red Knot).

# Summary of animals by federal and state legal status

Legal Status <sup>c</sup>	Fish	Amphibians	Reptiles	Birds	Mammals	Invertebrates
FE	5	1	1	1	5	29
FT	5	0	3	4	0	6
PFE	0	0	0	0	1	2
PFT	0	0	0	0	0	2
SE	9	2	4	5	11	49
PSE	0	0	0	0	0	0
ST	14	1	4	7	1	16
PST	0	0	0	0	0	0

c: FE = Federally Endangered; FT = Federally Threatened; PFE = Proposed Federally Endangered; PFT = Proposed Federally Threatened; SE = State Endangered; PSE = Proposed State Endangered; ST = State Threatened; PST = Proposed State Threatened.

#### **ACKNOWLEDGEMENTS**

The Virginia Department of Conservation and Recreation, the U.S. Fish and Wildlife Service, the Virginia Department of Wildlife Resources, and the Virginia Department of Agriculture and Consumer Services work cooperatively to insure the continued survival of Virginia's diverse fauna and other elements of natural diversity. The Division of Natural Heritage also works closely with many other state and federal agencies, local governments, conservation organizations, and many other organizations and individuals to seek adequate protection of Virginia's natural heritage. We are grateful to NatureServe for all they do to support us and fellow Network members. Megan Rollins was instrumental in developing this document.

HEMIPTERA (True Bugs, Cicadas,	Leafhoppers & Relatives)				
<i>Acantholomidea denticulata</i> (Stål, 1870)	A Shield Bug	GNR	SU		
Allopodops mississippiensis Harris and Johnson	Mississippi Turtle Bug	G2G3	SU		
Botocudo modestus (Barber)	A Seed Bug	G5	SU		
<i>Corixidea major</i> McAtee and Malloch, 1925	A true bug	GU	SU		
Elasmostethus atricornis (Van Duzee, 1904)	Hercules Club Stink Bug	G3?	SU		
Eurygaster alternata (Say, 1828)	A Shield Bug	G5	SU		
Galgupha denudata (Uhler, 1863)	A Shield Bug	G3	SU		
Glyptocombus saltator Heidemann, 1906	A true bug	GNR	SU		
<i>Ioscytus chapmani</i> McKinnon and Polhemus, 1986	Chapman's Shore Bug	GNR	SU		
Isthmocoris piceus (Say, 1832)	Black Stalk-eyed Bug	G5	SU		
<i>Ligyrocoris depictus</i> Barber, 1921	A seed bug	G4?	SU		
<i>Melanaethus cavicollis</i> (Blatchley, 1924)	A Burrower Bug	G4	SU		
Nannocoris arenarius Blatchley, 1926	A True Bug	GU	SU		
Neolygus crataegi Henry, 2007	Hawthorn plant bug	GNR	SU		
<i>Nepa apiculata</i> Uhler, 1862	A Water Scorpion	GNR	SU		
Oncozygia clavicornis Stal, 1872	A Turtle Bug	G3	SU		

Report run: 6/12/2025 Page 59 of 64

The following taxa are ranked SU (Unrankable) indicating their taxonomy and/or distribution in Virginia are poorly understood. More data are needed to assess their status.

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
<b>HEMIPTERA</b> (True Bugs, Cicadas,	Leafhoppers & Relatives)				
<i>Plagiognathus repetitus</i> Knight, 1923	Pine barrens plant bug	GNR	SU		
Pnirontis languida Stal, 1859	An Assassin Bug	G4	SU		
Ranatra australis Hungerford, 1922	Southern Water Scorpion	G5	SU		
Ranatra drakei Hungerford, 1922	Drake's Water Scorpion	G4	SU		
Stachyocnemus apicalis (Dallas, 1852)	Sandpit Alydid Bug	G4	SU		
Tominotus communis (Uhler, 1877)	A Burrower Bug	G5	SU		
Trialeurodes phlogis Russell, 1995	Phlox Whitefly	GU	SU		
COLEOPTERA (Beetles)					
Cantharis sheraldi Steury, 2020	a soldier beetle	GNR	SU		
Chlaenius augustus Newman, 1838	a ground beetle	GNR	SU		
Cyclotrachelus incisus (LeConte, 1848)	A Ground Beetle	G4	SU		
Diabrotica cristata (Harris, 1836, "1837")	A Leaf Beetle	GNR	SU		
<i>Dryobius sexnotatus</i> Linsley, 1957	Six-banded Longhorn Beetle	GNR	SU		
Eucaerus varicornis LeConte, 1853	A Ground Beetle	G4?	SU		
Gambrinus olentangyi (Knull, 1947)	a click beetle	GNR	SU

The following taxa are ranked SU (Unrankable) indicating their taxonomy and/or distribution in Virginia are poorly understood. More data are needed to assess their status.

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
TRICHOPTERA (Caddisflies)					
Oxyethira janella Denning, 1948	Little-entrance Oxyethiran Microcaddisfly	G5	SU		
<i>Oxyethira michiganensis</i> Mosely, 1934	A Caddisfly	G4G5	SU		
<i>Oxyethira rivicola</i> Blickle and Morse, 1954	A microcaddisfly	G5?	SU		
<i>Paranyctiophylax denningi</i> (Morse, 1972)	A polycentropodid caddisfly	G4G5	SU		
Paranyctiophylax serratus (Lago and Harris, 1985)	A polycentropodid caddisfly	G4	SU		
Polycentropus interruptus (Banks, 1914)	A polycentropodid caddisfly	G5	SU		
Polycentropus nascotius Ross, 1941	A polycentropodid caddisfly	G3G4	SU		
Polycentropus pentus Ross, 1941	A polycentropodid caddisfly	G3G4	SU		
Stactobiella martynovi Blickle and Denning, 1977	A microcaddisfly	G4	SU		
LEPIDOPTERA (Butterflies, Skippe	ers & Moths)				
Butterflies					
Celastrina lucia (W. Kirby, 1837)  = Celastrina ladon lucia	Northern Spring Azure	G5	SU		
Danaus plexippus plexippus (Linneaus, 1758)	Monarch	G4T3	SU	PT	
Papilio appalachiensis (Pavulaan and Wright, 2002)	Appalachian tiger swallowtail	G4	SU		
Satyrium caryaevorus (McDunnough, 1942)	Hickory Hairstreak	G4	SU		
Skippers					
Autochton cellus (Boisduval and Le Conte, [1837])	Golden-banded Skipper	G5	SU		
Thorybes confusis E. Bell, 1923	Confused Cloudywing	G4	SU		
Moths		0.5	011		
Acronicta dactylina Grote, 1874	Fingered dagger moth	G5	SU		
Acronicta subochrea Grote, 1874	Puzzling dagger moth	G4?	SU		
Bellura vulnifica (Grote, 1873) = Bellura melanopyga	A wetland borer moth	GNR	SU		
Cucullia alfarata Strecker, 1898	A noctuid moth	G4	SU		
Eupithecia peckorum Heitzman and Enns, 1977	Peck's Eupithecia moth	G4	SU		
Glena cognataria (Hübner, 1831)	Blueberry gray	G4	SU		
<i>Hydriomena bistriolata</i> (Zeller, 1872)	A Geometrid moth	GNR	SU		
Hydriomena divisaria (Walker, 1860)	Black-dashed hydriomena moth	G5	SU		
Idia majoralis (Smith, 1895)	Major idia moth	GNR	SU		

Report run: 6/12/2025 Page 62 of 64

The following taxa are ranked SU (Unrankable) indicating their taxonomy and/or distribution in Virginia are poorly understood. More data are needed to assess their status.

Scientific Name	Common Name	Global Rank	State Rank	Federal Status	State Status
LEPIDOPTERA (Butterflies, Skipp	ers & Moths)				
<i>Leucania commoides</i> Guenée, 1852	A noctuid moth	G5	SU		
Lithophane innominata (Smith, 1893)	Nameless pinion moth	G5	SU		
Orthofidonia exornata (Walker, 1862)	A geometrid moth	GNR	SU		
Papaipema nelita (Strecker, 1898)	Coneflower borer moth	G5	SU		
Psaphida grandis Smith, 1898 = Eutolype grandis	Gray sallow	G4	SU		
Psaphida thaxterianus (Grote, 1874)	A Noctuid Moth	G4	SU		
Resapamea passer (Guenée, 1852)	Dock rustic moth	GNR	SU		
Schinia bina (Guenée, 1852)	Bina flower moth	G4	SU		
Sympistis badistriga (Grote, 1872)	Brown-lined Sallow moth	G4	SU		
= Homohadena badistriga		<b></b>			
Tarache delecta (Walker, [1858])	A Noctuid Moth	GU	SU		
= Acontia delecta	Poster Conservable	C.F.	CLI		
Virbia ferruginosa (Walker, 1854)	Rusty tiger moth	G5	SU		
= Holomelina ferruginosa Virbia immaculata (Reakirt, 1864) = Holomelina immaculata	Immaculate tiger moth	G4	SU		
Zale sp. 2 nr. squamularis Schweitzer (unpublished)	A zale moth	G4Q	SU		
Zale sp. 3 nr. buchholzi	Maritime Zale Moth	G3G4	SU		
Zanclognatha theralis (Walker, 1859) = Zanclognatha gypsalis	A Noctuid Moth	G4	SU		
HYMENOPTERA (Bees, Wasps, Ar	ats & Palatives)				
Bombus sandersoni Franklin, 1913	Sanderson bumble bee	G5	SU		
Lasioglossum raleighense (Crawford, 1932)	A sweat bee	GNR	SU		
Lasius latipes (Walsh, 1863)	Wide-footed field ant	G5	SU		
Lasius murphyi Forel, 1901	Murphy's field ant	G5	SU		
Lasius plumopilosus Buren, 1941	Feathered fuzzy ant	GNR	SU		
Melitta melittoides (Viereck, 1909)	A melittid bee	GNR	SU		
Myrmecina davisoni MacGown, 2023	An ant	GNR	SU		
Polyergus lucidus Mayr, 1870	Shining Amazon ant	GNR	SU		
<i>Proceratium chickasaw</i> de Andrade, 2003	An ant	GNR	SU
